COMPANY OVERVIEW

Douglass Civil Pty Ltd is a family-run civil contractor based in south-west Sydney. We specialise in stormwater drainage, large-diameter pipe laying and deep excavation.

We work mainly for civil contractors. We also work for builders and developers. Brendon Douglass started the business in early 2017 after 12 years with TRN.

We understand what the client needs because of our background – not just our stormwater scope, but the whole project working seamlessly.

We run our own excavators and our own crews of operators, pipelayers and labourers: a core crew of 15–20, plus labour hire and subcontractors as needed.

WHO WE WORK FOR

- Civil contractors – our main clients. We take on the drainage, big pipe and deep excavation packages.
- Builders – stormwater, pits and excavation on building projects.
- Developers – drainage and civil works for new developments.

SERVICES

- **Stormwater drainage** – trenching, pipe laying, connections, backfill and compaction. Pipe from 150 mm plastic up to 2100 mm concrete pipe.
- **Large-diameter pipe laying** – RCP up to 2100 mm, twin and triple runs, and large precast structures: headwalls, large pits, culverts, water storage devices and GPTs.
- **Deep excavation** – planned under a SWMS. Multiple deep excavations completed using open-cut benching and/or shoring protection.
- **Pits, headwalls and GPTs** – installed to the engineer's design. We install precast pits, and prepare cast-in-situ pits (excavation, base and set-out) ready for the concreter's steel, formwork and pour.
- **Civil works** – bulk and detailed excavation, site preparation, backfill, and other civil construction work – with road building and full civil project experience from foreman and project manager years at TRN, we can support wider civil scopes.
- **Machine hire with operator** – excavators from 14 to 37 tonnes, hourly, daily or weekly by arrangement. Transport to site arranged.

PLANT

- Excavators from 14 to 37 tonnes (Volvo and Sumitomo), plus skid steers, with multiple attachments (buckets, compaction wheels, hydraulic hammers and more).
- Multiple fully kitted vehicles carrying pipe lasers, rotating lasers, compaction gear and lifting gear.
- Machine hire available hourly, daily or weekly by arrangement. Transport to site arranged.

SAFETY AND SILICA

- We work to each client's site inductions and join their toolbox talks, and run our own when a job or incident calls for it.
- Every job has SWMS (safe work method statements) and daily pre-starts, and we carry out silica exposure monitoring.
- Job logging and record-keeping are done in our own digital site app.
- Following the tighter national rules on respirable crystalline silica, we commissioned independent exposure monitoring for our own work and have put every recommendation from that company-specific report into practice.

OUR TEAM

Brendon Douglass, Managing Director:

Plumber 1999–2005, TRN 2005–2017 (pipelayer to foreman to project manager), started Douglass Civil in 2017.

Our team has people in key roles, including a construction manager, crew leaders, and HR and admin support. We have a core crew of 15–20, plus labour hire and subcontractors as needed.

CREW AND TICKETS

All crew hold a White Card. Our crew hold the tickets and qualifications their work needs, including plant operator VOCs and statements of attainment, first aid, and site-specific training, and we upskill as projects require.

INSURANCES

Douglass Civil Pty Ltd holds \$20 million public liability insurance, workers compensation, and plant and vehicle insurance. Certificates of currency are available to any client on request.

SERVICE AREA

South-west Sydney and greater Sydney.
